PROJECT REPORT

Task-1

The infographic covers three important topics: the meaning of digital literacy, safe internet practices, and useful digital tools for students. In the first section, I explained digital literacy as the ability to use technology effectively and responsibly. In the second section, I highlighted key safety tips such as using strong passwords, avoiding suspicious links, and protecting personal information. In the third section, I introduced useful tools like Google Drive, Canva, GitHub, and online learning platforms that help students improve productivity and skills.

While creating the infographic, I found it interesting to organize information in a visually appealing way. The most challenging part was selecting the right content and keeping it concise while still informative. This task helped me understand the importance of presenting information clearly and creatively.

Task-2

I created my digital portfolio by setting up profiles on GitHub, LinkedIn, and Kaggle. These platforms are widely used by students and professionals to showcase their skills and connect with others.

GitHub is mainly used for hosting and sharing projects, and I created a profile README to introduce myself. LinkedIn is a professional networking platform where I added my

education details to build my professional identity. Kaggle is a platform for learning data science and practicing real-world problems.

These platforms will help me build my online presence over the next four years. I plan to upload my projects on GitHub, connect with professionals on LinkedIn, and practice coding and data analysis on Kaggle. Creating these profiles made me realize the importance of maintaining a professional digital identity from an early stage.

networking platform where I added my education details to build my professional identity. Kaggle is a platform for learning data science and practicing real-world problems.

These platforms will help me build my online presence over the next four years. I plan to upload my projects on GitHub, connect with professionals on LinkedIn, and practice coding and data analysis on Kaggle. Creating these profiles made me realize the importance of maintaining a professional digital identity from an early stage.

Task-3

In this task, I explored coding and collaboration platforms. For coding practice, I used HackerRank and completed a beginner-level problem called “Solve Me First.” This helped me understand how coding platforms work and how problems are structured.

For collaboration, I created a Google Form titled “Digital Literacy Awareness Quiz.” The form includes five questions,

such as multiple-choice and short-answer questions, to test students' understanding of digital literacy and internet safety. I also viewed the responses in Google Sheets, which helped me understand how data is collected and analyzed.

These tools will be very useful in my academic journey. Coding platforms will help me improve my programming and problem-solving skills, while Google Forms will help in conducting surveys, quizzes, and collecting data efficiently.

Task-4

Poor digital communication can lead to misunderstandings and negative consequences. For example, if a student sends an email without a proper subject line or uses informal language, it may create a bad impression on the professor. In some cases, important requests may be ignored because they are not clearly written.

To avoid such issues, it is important to follow proper email etiquette, such as using a clear subject line, polite language, and structured content. Communication should be professional and respectful. This task helped me understand how to write effective emails and the importance of responsible online communication.

Task-5

While researching cybercrime, I was surprised by how easily people can fall victim to phishing attacks. Even simple

mistakes like clicking on a fake link can lead to serious consequences such as financial loss or data theft.

This task made me more aware of online safety practices. One important habit I will adopt is to always verify links and avoid sharing personal information online. I will also use stronger passwords and enable two-factor authentication for better security.
